~1991 Subject Index~

Note that US spelling is used throughout the Index
BR, Book Review
L, Letter
M, Monitor; these entries refer to summaries of primary research papers and are included as a guide to recently published work on these topics in other journals
TT, Technical Tip

abl gene, *Drosophila* 351
abscisic acid response element 8 (M)
achaete-scute complex (AS-C), *Drosophila* 403
actin: role in *Dictyostelium* locomotion 161
activin 247, 276, 344, 408
acute promyelocytic leukemia 44 (M)
adenylyl cyclase
  plant cells 359
  Dictyostelium aggregation 382
  regulation 29, 295, 344
agarose gel: DNA recovery 109 (TT)
aggregation
  Dictyostelium 381
  Myxococcus 361
Agrobacterium tumefaciens: DNA transmission 182
alternative splicing
  influenza viruses 262
  P transposase 282
amnesiac (*amn*) locus, *Drosophila* 224
Angelman syndrome 46
ankyrin/cdc10/SWI6 repeats 319, 344, 404
anteroposterior pattern formation
  Drosophila 269
  role of Hox genes 278, 329
  role of *T* gene 277
  Xenopus 248, 277
anther-specific gene 299
antigen
  minor histocompatibility 219
  processing 7 (M)
  variation in trypanosomes 307
antisense RNA: control of ColE1 replication 230
AP-1 transcription factors 49, 377
Arabidopsis thaliana: G protein 357
archaebacterial promoter 111 (M)
autoimmunity 223
autoradiography 241 (TT)
axis formation
  Drosophila dorsoventral axis 119, 244 (M), 390
  sea urchin 212
  vertebrate 245, 276, 332

Bacillus subtilis: sporulation 167
bacterial genetics 68 (BR), 246 (BR), 341 (BR)
  interspecific gene transfer 181
Beckwith–Wiedemann syndrome 47
bicoid gene, *Drosophila* 245, 269
bithorax complex, *Drosophila* 74
  subdomains and boundary elements 338
bone morphogenetic protein (BMP) 277, 408
'boundary' elements in gene expression 335
Brachyury (*T*) gene, mouse 277
bride of sevenless (*boss*) gene, *Drosophila* 250, 372

C factor, *Myxococcus xanthus* 361
C4 plant development 191
cactus protein, *Drosophila* 123, 320
Caenorhabditis elegans
  egg-laying system 6 (M)
  handedness in development 144 (M)
  kinesin-related protein 112 (M), 244 (M)
  phorbol ester/diacylglycerol-binding protein 313 (M)
  vulval induction 42 (M), 366
calcium-based signal transduction in plants 356
cAMP *see* cyclic AMP
cancer and carcinogenesis *see* tumors and tumorigenesis
cdc/*CDC* genes 95, 130, 293, 401
cdc10/SWI6/ankyrin repeat 319, 344, 404
cDNA
  libraries: hybridization analysis 314
  sequencing 281 (M)
cell ablation in *Drosophila* 281 (M)
cell cycle
  cyclins 95, 127, 281 (M), 396, 401
  Drosophila embryo 125
  macrophage 398
  and *RAS*/*ras* genes 29, 94
  regulation of E2F 281 (M)
  regulation by growth factors 345
  yeast mating response 97, 258, 393
cell lineage: sea urchin 212
cell locomotion
  bacterial 196
  Dictyostelium 161
cellular retinoic acid-binding protein (CRABP) 35
cellular retinol-binding protein (CRBP) 35
central nervous system *see* CNS
centromere
  abnormalities in Roberts syndrome 206 (M)
  conserved protein 280 (M)
chicken
  embryogenesis 77 (M), 277
  vitellogenin gene 210
chlorambucil mutagenesis 17
chloroplast: cryopreservation 280 (M)
chromatin
  boundary elements 335
  genomic sequencing 207
  transcription 175
chromosome banding 150, 306 (BR)
chromosome painting 151, 281 (M)
ciliates: pattern formation 66 (BR)
CLN (cyclin) genes 96, 260
clonal analysis of leaf development 192
cloning techniques 201 (BR)
CNS (central nervous system) development
  Drosophila abl gene 353, 403
  vertebrate dorsoventral pattern 278
ColE1 plasmid replication 230
collagenase gene regulation 53, 379
colony filter storage 178 (TT)
colony-stimulating factor 1 (CSF-1) 345, 398
complementary DNA *see* cDNA
conjugation, bacterial 181
cosmid clones: genome analysis 157, 315
CpG island
  analysis by genomic sequencing 209
  fragile X region 239
CRABP (cellular retinoic acid-binding protein) 35
CRBP (cellular retinol-binding protein) 35
CREB (cyclic AMP response element-binding protein) 379
Creutzfeldt–Jacob disease 61
cross-coupling of signal transduction pathways 377
CSF-1 (colony-stimulating factor 1) 345, 398
cyclic AMP
  Dictyostelium aggregation 344, 382
  in plant cells 359
  response, yeast 29, 295, 344, 418
cyclic AMP phosphodiesterase: *dunce* gene product 225
cyclic GMP: *Dictyostelium* development 382
cyclin 95, 127, 281 (M), 396, 401
cyclops mutation, zebrafish 179 (M)
cytochrome oxidase genes
  editing 37
  transcription 2
cytoplasmic male sterility 39

decapentaplegic (*dpp*) locus, *Drosophila* 409
Delta (*Dl*) locus, *Drosophila* 405
DER locus, *Drosophila* 388

development *see* embryogenesis
diabetes mellitus
  NOD mouse 243 (M)
  triggering by viral infection 205 (M)
Dictyostelium discoideum
  locomotion 161
  signal transduction in differentiation 344, 381
DIF factor, *Dictyostelium* 385
differentiation 202 (BR)
disomy, uniparental 46
DNA
  fingerprinting 305 (BR)
  methylation 239
  rearrangement: *B. subtilis* sporulation 169
  replication 230
  topology 173 (BR)
DNA–protein interactions
  in chromatin 175, 335
  determination of binding specificity 8 (M)
  homeobox gene targets 74
  nuclear oncoproteins 49
  POU proteins 323
  studying *in vivo* 207
dorsal protein, *Drosophila* 112 (M), 119, 318
dorsoventral pattern formation, *Drosophila* 119, 244 (M), 390
Drosophila melanogaster
  abl gene 351
  boundary elements 336
  cell ablation 281 (M)
  Deformed gene: autoregulation 144 (M)
  dorsal protein 112 (M), 119, 318
  dorsoventral pattern formation 119, 244 (M), 390
  dunce locus 224
  EGF receptor homolog (DER) 388
  eye development 250, 372
  gastrulation 44 (M), 244 (M)
  genome project 155
  gypsy element 86
  head development 267
  homeobox gene targets 74
  leg development 179 (M)
  localization of maternal mRNAs 313 (M)
  mitosis in the early embryo 125
  muscle development 44 (M), 78 (M)
  Notch locus 403
  P element transposition 282
  prospero gene 205 (M)
  sex determination 6 (M)
  transvection 8 (M)
dunce locus, *Drosophila* 224
DVR gene family 408

E2F transcription factor 281 (M)
EC (embryonal carcinoma) cells: *HOX* gene regulation 330
editing, RNA 37, 140
EGF *see* epidermal growth factor
Ellipse (*Elp*) mutation, *Drosophila* 389
embryogenesis 276
  dorsoventral pattern formation, *Drosophila* 119
  DVR gene family 408
  eye development, *Drosophila* 250
  growth factors as morphogens 245
  head development, *Drosophila* 267
  imprinting effects 46, 107
  mitosis in the *Drosophila* embryo 125
  neurogenesis, *Drosophila* 351, 403
  role of *Drosophila DER* locus 388
  role of mammalian PDGF 413
  role of mammalian POU proteins 323
  sea urchin 212
  signal transduction 343
  teratogenic effects of retinoids 35
embryonal carcinoma (EC) cells: *HOX* gene regulation 330
embryonic stem (ES) cells: freezing 76 (TT)
enhancer *see* promoters/enhancers
Enhancer of split [*E(spl)*] locus, *Drosophila* 405
ENU (*N*-ethyl-*N*-nitrosourea) 17
epidermal growth factor (EGF) homolog: *Notch* product 404
epidermal growth factor (EGF) receptor homolog
  C. elegans let-23 product 367
  Drosophila DER 388
epithelial scatter factor, chick 77 (M)
ES (embryonic stem) cells: freezing 76 (TT)
Escherichia coli
  ColE1 plasmid replication 230
  flagellum 196
  IS*1* transposon 203
  retron 111 (M)
N-ethyl-*N*-nitrosourea (ENU) 17
ets oncogene and Ets protein 50
evolution
  DVR gene family 412
  imprinting 45, 108
  intron 145
  retrovirus resistance 22
  RNA virus recombination 72, 188
  segmentation 270
  ZFY gene family 133
expression site-associated genes, trypanosome 307
eye development, *Drosophila* 250, 372

faint little ball (*flb*) locus, *Drosophila* 388
familial adenomatous polyposis coli gene 312 (M)
fibroblast growth factor (FGF), basic 247, 276, 343
fingerprinting, DNA 305 (BR)
flagellum, bacterial 196
fluorescence *in situ* hybridization 149
footprinting, genomic 207
fos oncogene and Fos protein
  cross-coupling of signal transduction pathways 377
  transcriptional regulation by 49
fragile X syndrome 239
frameshifting: control of IS*1* transposition 203
FUS3 kinase, yeast 260

G protein 93, 344
  Arabidopsis thaliana 357
